

LEE Chak Fai

I think we are so lucky to have some medical students in this trip.

Our health education sections are mainly prepared by medical students, honestly, I think what Dabao gained from us is only the knowledge about personal hygiene and sex. Other students like me, who are not familiar with these kind of knowledge, could only try to bring some happiness to the children in Dabao, and let them know they are a part of the society. This is why the medical students are so important in our trip.

However, I think the main value of this trip is not only about what Dabao gain from us, but also about what we experienced in Dabao. In this trip, we slept in Dabao, had lunch in Dabao and we communicated with people in Dabao. These are something that cannot be forgotten. Maybe we can't help Dabao, but we can help some other people in need someday in the future as long as we remember what we see in Dabao.
