

Reflection on the from 19th – 21st June, 2017 (Mon-Wed)

Ng Ka Wing – BEng (CivE) II

The four-day experiential learning means a fruitful journey to me such that I am so grateful to have this opportunity to be one of the team members. It is my first time to visit South China University of Technology in Guangdong. Not only it is a great chance to interact with university students majoring in the same field, it is also a treasurable time to learn about building codes in different countries through the presentations.

Building codes and industrial practices vary with the environmental specifications in different regions. These enables me to have a brief impression of various building codes. Moreover, we also take the time to pay a visit to Humen Pearl River Bridge which is still under construction works. It is a 12.891 km, remarkable bridge connecting Guangzhou and Dongguan in China. It is observed that bridge building technology and planning strategy are undergo rapid improvement. Many practical safety procedures are also introduced to us in the site such that I can have a wider picture of this industry.
