

LEUNG Kai Wang (Leung)

BEng (CivE) IV

Before actually going to Guangxi, we all think that we would participate in the construction work, which includes the demolition of the abandoned canteen, site formation, construction of foundation and the structure, etc.. However, due to construction of road connecting Daping and the city, all the construction work has to be postponed by half a year and our plan is changed, therefore.

In this month, we 6 people worked together to collect useful information for our project very efficiently with superb division of labor: some of us read the design code while some of us do the calculation. We learnt to cooperate with the team efficiently and I think all of us have identified our strengths and weaknesses. Also, all of us were very different from each other, in terms of personality and characteristic, but we can learn to appreciate and learn from each other.

At last, I am very impressed by the interaction between human and the nature in rural areas. By the time we visited Mr. Mung's home, we went to a river in the countryside and we caught a snake during the journey and cooked it. We swam in a river with very clean and fresh water in the countryside and we had so much fun there.

At last, this course definitely provides a great opportunity for me to know more about engineering, especially in remote area, and the construction method is very different from that in urban area. Also, the construction in rural area is limited by many factors. Besides engineering, we also had a great experience of life in Guangxi and this is a very memorable and unique experience in my life. I believe that this will be one of the most memorable experience in my life.
