Civil Engineering, Year 3

This work trip is very meaningful and held successfully. It has been my very pleasure to take part in this work trip. This is my second time participating in Project Mingde, this trip gave me a great opportunity to bring the knowledge I had learnt during lesson into real life.

In the feasibility work, I am responsible for dimension measurement in Du Ling Primary School and I am working as a team with two students from South China University of Technology and other two students from HKU. We measured all the height of the concrete wall, width of doors and windows and also the staircases, etc. These data were needed for drawing the map of the school so that we could know the arrangement of the buildings in school. We took a whole day to finish our measurement work. I could feel the enthusiasm of my teammates and they are really helpful.

While measuring the dimension of the classroom, there were many cracks on the wall. A professor from South China University of Technology came in and taught us about how to estimate the stability of a building by observing its crack. The taught was wonderful and we all learnt a lot.

At last, the experience in the work trip was wonderful and unforgettable. Hopes that our work could contribute to the society and help those kids in the primary school.
