

**Reflection on Third Study Trip to Wangdong Bridge**  
**CHAU Hok Hei Ryan BEng I**

This is my first visit to Guigang and is the first activity I have joined since becoming part of PMSA. This is a new and eye-opening experience for me, having the opportunity to know more about the works of being a civil engineer, as well as the chance to learn how to read structural design diagrams. Though I know little about what actually the different symbols mean, however knowing more about related issues such as land contracting issues, and being able to take part in minor steps in the construction such as helping out on installing the surveillance camera on the upper floor of the campus, making floor-to-roof measurements, make me feel that I can contribute to this project by having hands-on experience.

The reason I joined PMSA back in September 2018 was because I wanted exposure in the field of civil engineering. China has been rapidly developing over the recent years, and the demand for engineers increases as more and more construction projects are being approved and implemented. I believe this will be my doorstep to the Chinese market, where I get to learn about related rules and standards in China, eventually I hope my experience and my time serving PMSA would be useful for my future prospects.
