

# DEVELOPING SUSTAINABLE CITIES: THE NEED FOR INNOVATIVE APPROACHES

**Dr. Asanga Gunawansa**

Asst. Professor

Department of Building

School of Design and Environment

National University of Singapore

Associate Member, Executive Committee  
Asia Pacific Centre for Environmental Law

## Issues Covered

- 
- **What is Sustainable Development?**
  - **Sustainable Development Challenges**
  - **Key Features of a Sustainable City**
  - **Sustainable Development Governance**
  - **Innovative Approaches**

# What is Sustainable Development?

- The standard definition of SD comes from the **Brundtland Commission** (Our Common Future, The UN Commission on Economic Development, 1987):

***“Development that meets the needs of the present, without compromising the ability of future generations to meet their own needs.”***

- This is the most widely used and popular definition.

# What is Sustainable Development?

- The full definition of the Brundtland Commission, seldom quoted, continues:

*“It (SD) contains within it two key concepts: the concept of “needs”, in particular the essential needs of the world’s poor, to which overriding priority should be given; and the idea of limitations imposed by the state of technology and social organization on the environment's ability to meet present and future needs.”*

# Sustainable Development Challenges

- **UN Conference on the Human Environment (Stockholm 1972)** , sought to help Governments rethink economic development and find ways to halt the destruction of irreplaceable natural resources and pollution of the planet.
- The concept of **SD** started receiving a lot of attention after the **United Nations Conference on Environment and Development (Earth Summit, Rio de Janeiro 1992)**.
- **The World Summit on Sustainable Development** which was held in Johannesburg in 2002 (**Rio+10**) identified several key aims for **SD**:
  - Reducing the number of people without access to clean water from 1 billion to 500 million by 2015.
  - To halve the number of people without proper sanitation to 1.2 billion.
  - To increase the use of sustainable energy sources.

# UN Millennium Development Goals (2001)

# Sustainable Development Challenges

## UN Millennium Development Goals (2001)

- **Goal 1- Eradicate Extreme Poverty and Hunger**
  - Target 1A - Halve, between 1990 and 2015, the proportion of people whose income is less than one dollar a day.
  - Target 1B - Achieve full and productive employment and decent work for all, including women and young people.
  - Target 1C - Halve, between 1990 and 2015, the proportion of people who suffer from hunger.

# Sustainable Development Challenges

## Reality check - Some quick facts

- Approximately 1.4 billion people live on US\$1.25 or less a day.
- Approximately 10 million die every year of hunger and hunger-related diseases.
- Rising food prices may push 100 million people deeper into poverty.
- However, fewer children below five are undernourished (down from 33% in 1990 to 26% in 2006).

[Source: <http://www.un.org/millenniumgoals/>]

# Sustainable Development Challenges

## Three key challenges:

1. Overpopulation in the developing world.
  - The developing world has 80% of the world's population and consumes 20% of its resources.
2. Overconsumption in the developed world.
  - The developed world has 20% of the world's population and consumes 80% of its resources.
3. Striking a balance between competing challenges
  - E.g. Conflict between dealing with Climate Change and Eradicating Poverty

# Population Growth and Scarce Resources

- According to the UN World population that was 2.5 billion in 1950, and 4.4 billion in 1980, rose to 6 billion in 2000.
- **World population is projected to grow to about 8 billion in 2025.**
- In 2050, the projected world population is 9.3 – 11 billion in 2050.
- **Almost all future population growth will occur in the developing world, mainly in Asia.**
- **This increased population, combined with higher standards of living, will pose enormous strains on land, water, energy and other natural resources.**
- **What actions are required?**

## Sustainable Development Challenges

- Sustainable Development is not only about protecting the environment and dealing with climate change.
- It requires us to find solutions to other development needs of people. These include:
  - Economic development
  - Health and sanitation
  - Education
  - Equality
  - Rights of Children

## Building Ecocities is Great

*"Lilypad, a floating ecopolis for climate refugees", a conceptual design by Vincent Callebaut Architect. For more information on the project see: <http://vincent.callebaut.org/page1-img-lilypad.html>*

*Dr. Asanga Gunawansa*

## Some countries need to deal with these

## Sustainable Development should be for all

# The Challenge for States - Cost of Transition ?

## Urban Slums

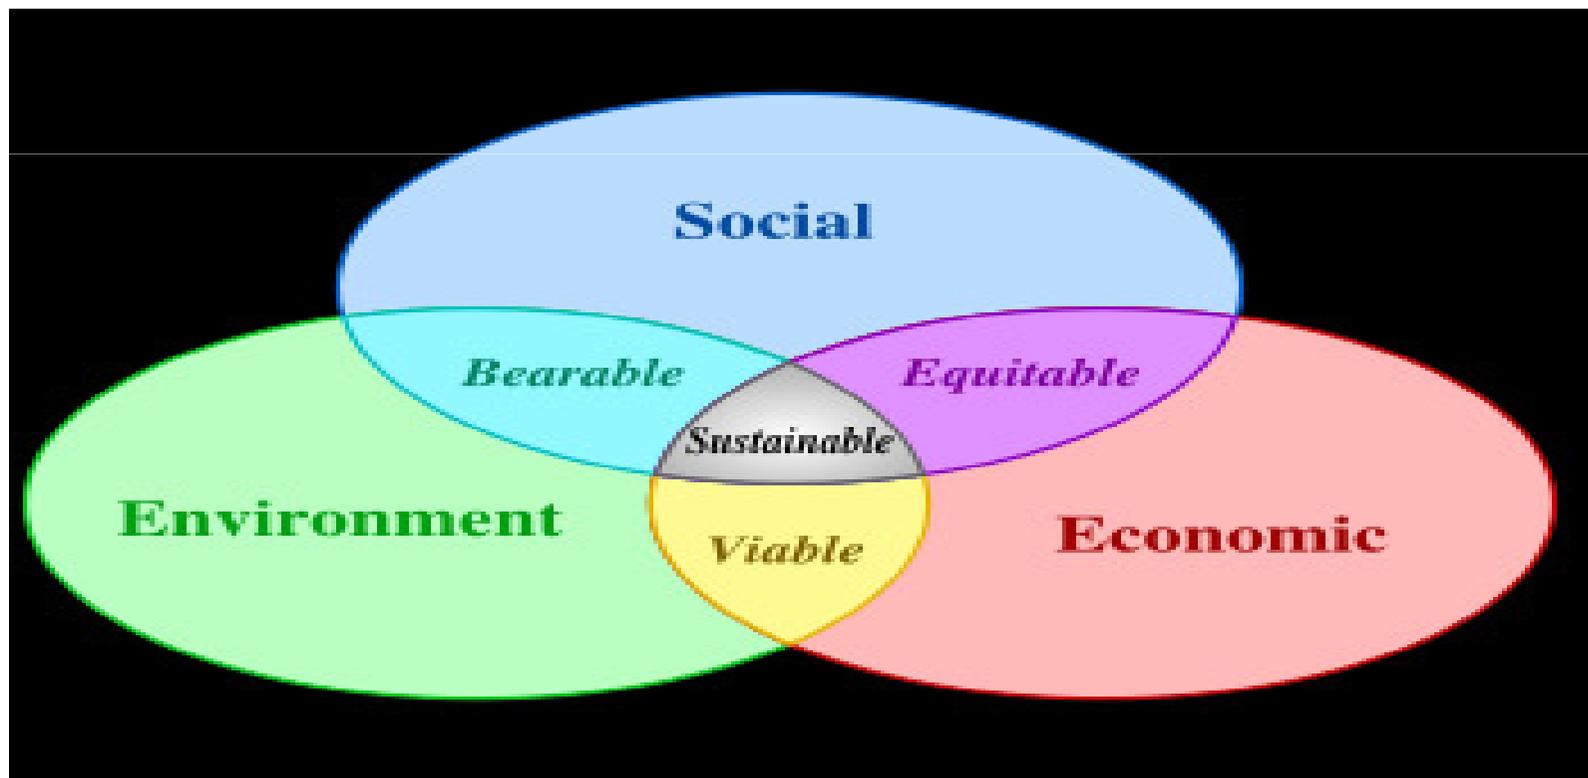

## Green Apartments

# What is a Sustainable City?

- A sustainable city should enhance the economic, social, and environmental well-being of current and future generations.
- These three can complement each other through effective and efficient policy making.

# What is a Sustainable City?

## Important considerations:

- Population growth.
- In 30 years, 80% of the world's urban population will live in developing countries
- In 30 years, 70% of the world's population will live in cities
- In 2015 there will be 22 megacities, each with more than 10 mill. Inhabitants

## The Point

- **City planning will be decisive for sustainable energy consumption, controlling adverse environmental impacts and boosting economic development.**

# SD Governance

## Approaches

- Top down as well as bottom up approach is needed
- Common but differential responsibility
- Leave no room for forgotten communities
- Identification of resources, needs and limitations
- Benchmarks
- Performance monitoring
- Regulations, laws, rules and guidelines

# What Should States Do?

Basic SD Concepts	Required Action
The duty of States to ensure sustainable development	<ul style="list-style-type: none"> <li>• Promote responsible production and consumption.</li> <li>• Respect for ecosystem support capacity.</li> <li>• R&amp;D of alternative resources.</li> </ul>
The principle of equity and the eradication of poverty	<ul style="list-style-type: none"> <li>• Social equity and solidarity.</li> <li>• Policies that cater to the needs of the present whilst saving the world for the future.</li> <li>• CSR to play a role.</li> </ul>
The principle of common but differentiated responsibilities.	<ul style="list-style-type: none"> <li>• Bilateral and regional partnerships and cooperation.</li> <li>• Technology transfer.</li> </ul>
The principle of the precautionary approach	<ul style="list-style-type: none"> <li>• Precaution is better than cure</li> </ul>

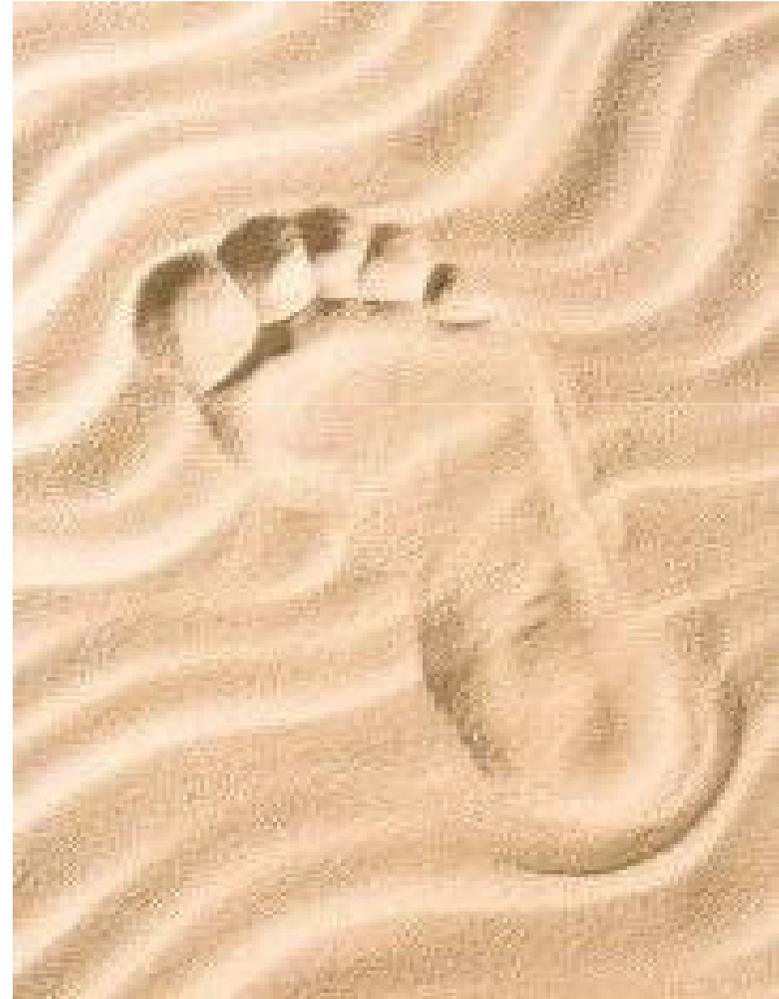

# What Should States Do?

<b>SD Principles</b>	<b>Required Action</b>
Polluter pays	<ul style="list-style-type: none"><li>• Establish laws and policies that promote environmental remediation.</li><li>• Impose green taxes</li></ul>
Public participation, access to information and to justice	<ul style="list-style-type: none"><li>• Educate the public.</li><li>• Establish efficient and effective pricing mechanisms for utilities.</li><li>• Establish minimum needs and required subsidies.</li><li>• Enabling participation and commitment (organise public cooperative societies to invest in green cities).</li><li>• Enable access to knowledge.</li></ul>

# What Should States Do?

<b>Basic SD Principles</b>	<b>Required Action</b>
Balancing the often competing SD demands (e.g. economic development vs. environmental preservation)	<ul style="list-style-type: none"><li>• Establishing a legal and policy environment in which competing SD demands could be balanced.</li></ul>
Some SD demands have no national borders (e.g. climate change)	<ul style="list-style-type: none"><li>• Accept responsibility and take necessary mitigatory measures and adaptation initiatives.</li></ul>
Financing for SD	<ul style="list-style-type: none"><li>• Rethinking PFI and PPP with community participation (PP&amp;CP)</li><li>• Green Financing.</li><li>• Informal Economies and Local Barter.</li><li>• Home and Community Agriculture.</li></ul>

**The choices we make today will decide our future**

*Dr. Asanga Gunawansa*

# Yes we can...

- ***"Future generation is the most important thing."***  
~ Confucius
- ***"Treat the Earth well. It was not given to you by your parents. It was loaned to you by your children"***  
~ Kenyan Proverb
- ***"Not one drop of water shall reach the sea without first serving man" –***  
~ Parakrama Bahu the Great ( 1153-1186)
