

This is the first time I join the preparation work of Guigang Project in Project Mingde. It was a pretty good experience for me to know more about the knowledge of contract and repairing work. In this trip, there were two main tasks for us to do. First, we had to prepare a contract of the repairment of Duling Primary School, and discuss in detail with the contractor. Second, measurement and investigation were needed in the site. Since we are going to construct a new kindergarten in that place, so we need to remove the old toilet and rebuild a new one for students. Therefore, this information will be used to decide the best position and design for rebuilding the toilet after coming back to Hong Kong.

In the site, Dr. Wong had analyzed the problems of the school building's structure to us and explained the repairing works of school building clearly. For instance, the pros and cons of different methods for the reinforcement of building's structure, and the method that they decided to use and reasons behind it. It was a great chance for me to learn more new knowledge in the aspect of civil engineering. Also, we had briefly discussed the position for the toilet and the design of it.

Besides the working part, the experience in Guigang was also wonderful. Guigang is a totally different place from Hong Kong. Although the development of Guigang is not as prosperous as Hong Kong, its natural environment is phenomenal. It is a very quiet and beautiful place that is hard to find in Hong Kong. Also, the principal and teachers are very hospitable and I am looking forward to visiting this place again.
