

This is my first time to join the site visit trip of Project Mingde. We have visited Duling Primary School in Guigang for 3 days to collect more information for the project of building kindergarten and toilet. It was a great experience for me to get involved in the construction design phase and know more about the lifestyle of Guigang student.

Before the trip, I joined one of the toilet design team. We drew the design and had some discussion with the engineers. However, we are still missing some information to complete the drawing design. Therefore, the main purpose of this trip is to collect information for drawing design and get the opinions from the school principal and villagers.

Along the trip, we did some measurements on site based on the previous preparation work and interviewed with the school principal and bass Wu for their ideas. Also, we visited the village during lunchtime and had a good chatting with the villagers. They have a lot of interests about the building a kindergarten and I realized that they have a lot of expectations as well. Besides, they gave a lot of motivations to us. At the last day of this trip, we went to an exhibition to see some architectural designs for our further reference.

It is an unforgettable experience for me to get involved in a construction project for the first time. We can apply our knowledge what we have learnt. Besides, this trip is co-organized with SCUT. There are some civil engineering students from SCUT with us. It is a great chance to meet the civil engineering students outside Hong Kong and we all shared the experience and school life to each other. To conclude, this trip is very meaningful and I am looking forward to visiting Guigang again.
