

Reflection on Study trip to University of South China University of Technology

(Jun 19-22, 2018)

CHU Long Yin BEng (ME) IV

It is my honor to participate in this study tour and this four-day experiential learning activity turned out to be a fruitful journey to me so I am very grateful to have this opportunity to be one of the team members. It is also my first time to visit South China University of Technology (SCUT) in Guangzhou. Not only it is a golden opportunity to interact and exchange knowledge with our counterparts in SCUT, but also a treasurable time to learn about construction industry and technology in the Mainland China. In addition, we also paid a visit to Humen Second Bridge which is still under construction. It is a 12.891 km, remarkable bridge connecting Guangzhou and Dongguan in China. It is observed that bridge building technology and planning strategy are improving rapidly such that the highest possible safety standard can be achieved. Many practical safety procedures were also introduced in the site such that I could have a wider picture of this industry.
